## Description

Imina Technologies SA design manufacture and distribute complete lines of robotics solutions for electron and light microscopes. Using a novel mobile motion technology, our robots for microscopes combine nanometer resolution of positioning, unprecedented ease-of-use and flexibility.

Their ultra-compact design provides high stability ensuring steady pose over long measurement sequence while preventing sample damages. Our robots can be easily integrated onto optics based investigation tools or inside an SEM for micro- or nano-probing investigations. Overall, this enables FA Engineers to quickly gather data to understand the failure cause.
